The Severely Atrophic Maxilla: Stabilizing Implants in the Pterygomaxillary and Zygoma Regions

DESCRIPTION OF COURSE

This course will include a live surgery showing the placement of the implants along with a hands-on mannequin laboratory workshop. Course highlights will include presentations on treatment planning, as well as the surgical, radiological, biomechanical, and restorative aspects of new approaches to treat the compromised maxilla. Intraoral live video gives participants the "Surgeon's Eye View" of the procedure and interactive discussion. Courses are presented in a private clinical/teaching facility with full laboratory support.

EDUCATIONAL GOAL

To familiarize participants with the surgical, prosthetic and post-treatment phases of dental implants in the pterygomaxillary and zygoma regions.

EDUCATIONAL OBJECTIVES

1. To outline the advantages and disadvantages of implant treatment in the pterygomaxillary and zygoma regions in comparison to bone grafting options.
2. To provide clinical instruction and hands-on zygomatic and pterygomaxillary implant training.
3. To provide clinical patient management before, during and after dental implant treatment in the atrophic maxilla.
4. To review post-prosthesis maintenance via oral hygiene, checking osseointegration and biological response to implants on a recall schedule.

EDUCATIONAL METHODS

This course utilizes:

- Lectures
- Slides and videos
- Interactive discussions
- Live demonstration

COURSE CONTENT

- Comparison of dental implant options for the maxilla
- Discuss concepts of implant placement using zygoma fixtures
- Observation of live implant surgery of the atrophic maxilla
- Hands-on training using a mannequin
- Prosthetic restoration of implants in the pterygoid and zygoma regions
- Maintenance of pterygomaxillary and zygoma implants.
